

Engineering Reliability for Industrial Innovation

Trusted Embedded System Partner Since 2004

- ✓ 20+ Years Engineering Experience
- ✓ 300+ Projects Delivered Worldwide
- ✓ Industrial-Grade Quality Standards

Expert in Custom Embedded Solutions Since 2004

"Established in 2004, Beijing Hengfeng Ruike Technology Co., Ltd. is a precision-driven engineering firm specializing in industrial embedded systems and long-lifecycle platforms. For over two decades, we have empowered industrial manufacturers with robust, scalable, and deployment-ready solutions designed to excel in the most demanding environments."

 **2004**
Founded

Headquarters

 **50+**
Engineering Experts

 **ISO 9001**
Certified Quality

Built on Engineering Discipline

 System-level architecture planning

 Reliability-oriented hardware design

 Structured software integration

 Controlled validation and verification processes

 Long-term component strategy and lifecycle planning

Engineering Culture and Responsibility

We believe engineering quality is a matter of discipline. This means:

- ✓ Rigorous technical documentation & traceability
- ✓ Strict hardware/software version lifecycle management
- ✓ Agile & transparent technical collaboration
- ✓ Structured milestone management
- ✓ Strict quality review procedures

Reliability is not an afterthought — it is engineered from the beginning.

Partnering with Global Industrial Companies

Our experience spans industrial automation, intelligent equipment, energy systems, robotics, and related sectors. We understand international collaboration standards and maintain professional communication practices that support long-term overseas partnerships. Our solutions are deployed across North America, Europe, and Asia-Pacific, meeting diverse international compliance and industrial standards.

Industries We Serve

Industrial Automation

Robotics

Energy

Smart Manufacturing

From Concept to Long-Term Support

Our strength lies not only in development capability, but in engineering continuity. We support clients through:

- Architecture definition
- Design validation
- Production readiness preparation
- Risk management in mass production
- Ongoing technical evolution

By aligning technical execution with long-term product strategy, we help customers reduce uncertainty and increase project confidence.
